Wyoming Proud

- Since 1929, Security State Bank has proudly served the people of Northern Wyoming. Our locally-owned and operated bank is small enough to listen, yet big enough to help.
- Ron Boyd, CEO

Other Important Information	
<p>For Alaska, Illinois, Maryland and North Dakota Customers: We will not share personal information with nonaffiliates either for them to market to you or for joint marketing – without your authorization. For California Customers: We will not share personal information with nonaffiliates either for them to market to you or for joint marketing – without your authorization. We will also limit our sharing of personal information about you with our affiliates to comply with all California privacy laws that apply to us.</p>	

Security Statement

Our website brings together a combination of industry-approved security technologies to protect data for the bank and for you, our customer. It features a VeriSign-issued Digital ID for the bank's Internet Service Provider hosting our website, Secure Sockets Layer (SSL) protocol for data encryption, and a router and firewall to regulate the inflow and outflow of server traffic.

Secure Data Transfer

Once a server session is established on an https secure page, the user and the server are in a secured environment. Because the server has been certified as a 128-bit secure server by VeriSign, data traveling between the user and the server is encrypted with Secure Sockets Layer (SSL) protocol. With SSL, data that travels between the bank and customer is encrypted and can only be decrypted with the public and private key pair. In short, the bank's server issues a public key to the end user's browser and creates a temporary private key. These two keys are the only combination possible for that session. When the session is complete, the keys expire and the whole process starts over when a new end user makes a server session.

Router and Firewall

Secure forms must filter through a router and firewall before they are permitted to reach the server. A router, a piece of hardware, works in conjunction with the firewall, a piece of software, to block and direct traffic coming to the server. The configuration begins by disallowing ALL traffic and then opens holes only when necessary to process acceptable data requests, such as retrieving web pages or sending customer requests to the bank.

Using the above technologies, your Internet loan application and check reorder transactions are secure.

Texts and Emails

Security State Bank will not request your banking information through email or text messages. Texts and emails are only sent regarding your accounts when initiated by you.

If you should have any questions about a text or email you receive please contact your local branch.
