Subject: eBay: urgent security notice [Sun, 05 Feb 2006 18:54:02 -0400]

Sent: Sun 2/5/2006 6:03 PM

Dear eBay Member,

We regret to inform you that your eBay account could be suspended if you don't re-update your account information.

To resolve this problem please visit link below and re-enter your account information:

https://signin.ebay.com/ws/eBayISAPI.dll?SignIn&sid=verify&co_partnerId=2&siteid=0

If your problems could not be resolved your account will be suspended for a period of 24 hours, after this period your account will be terminated.

For the User Agreement, Section 9, we may immediately issue a warning, temporarily suspend, indefinitely suspend or terminate your membership and refuse to provide our services to you if we believe that your actions may cause financial loss or legal liability for you, our users or us. We may also take these actions if we are unable to verify or authenticate any information you provide to us.

Due to the suspension of this account, please be advised you are prohibited from using eBay in any way. This includes the registering of a new account. Please note that this suspension does not relieve you of your agreed-upon obligation to pay any fees you may owe to eBay.

Regards,

Safeharbor Department eBay, Inc

Phishing works

- 73 million US adults received more than 50 phishing emails each in the year 2005
- Gartner estimated 3.6 million adults lost \$3.2 billion in phishing attacks in 2007
- Financial institutions and military are also victims
- Corporate espionage

Why phishing works

- Phishers take advantage of Internet users' trust in legitimate organizations
- Lack of computer and security knowledge [Dhamija et al.]
- People don't use good strategies to protect themselves [Downs et al.]

Anti-phishing strategies

- Silently eliminate the threat
 - Find and take down phishing web sites
 - Detect and delete phishing emails
- Warn users about the threat
 - Anti-phishing toolbars and web browser features
- Train users not to fall for attacks

User education is challenging

- Users are not motivated to learn about security
- For most users, security is a secondary task
- It is difficult to teach people to make the right online trust decision without increasing their false positive errors

Is user education possible?

- Security education “puts the burden on the wrong shoulder.”

[Nielsen, J. 2004. User education is not the answer to security problems.
<http://www.useit.com/alertbox/20041025.html>.]

- “Security user education is a myth.”

[Gorling, S. 2006. The myth of user education. 16th Virus Bulletin International Conference.]

- “User education is a complete waste of time. It is about as much use as nailing jelly to a wall.... They are not interested...they just want to do their job.”

[Martin Overton, a U.K.-based security specialist at IBM, quoted in
http://news.cnet.com/2100-7350_3-6125213-2.html]

Web site training study

- Laboratory study of 28 non-expert computer users
- Control group: evaluate 10 sites, 15 minute break to read email or play solitaire, evaluate 10 more sites
- Experimental group: evaluate 10 sites, 15 minutes to read web-based training materials, evaluate 10 more sites
- Experimental group performed significantly better identifying phish after training, but more false positives
- People can learn from web-based training materials, if only we could get them to read them!

P. Kumaraguru, S. Sheng, A. Acquisti, L. Cranor, and J. Hong. Teaching Johnny Not to Fall for Phish. *ACM Transactions on Internet Technology (TOIT)*, Volume 10, Issue 2, May 2010.

How do we get people trained?

- Problem
 - Existing materials good, but could be better
 - Most people don't proactively look for security training materials
 - “Security notice” emails sent to employees and/or customers tend to be ignored
 - Too much to read
 - People don't consider them relevant
- Solution
 - Find a “teachable moment”: PhishGuru
 - Make training fun: Anti-Phishing Phil
 - Use learning science principles

PhishGuru

PhishGuru Embedded training

- Send emails that looks like a phishing attack
- If recipient falls for it, intervention warns and highlights what cues to look for in succinct and engaging format
- User studies have demonstrated that this is effective
- Delivering same training via direct email is not effective!

Professional & legitimate looking design

Urgent messages

Account status threat

Links don't match with status bar when mouse is moved over.

1. What's a phishing scam?

- Scammers send fake emails impersonating well-known companies to trick you into giving them your personal information.
- Giving up your personal information such as Social Security Number, credit card number, or account password will lead to identity theft and financial loss.

3. What are simple ways to protect yourself from phishing scams?

- **Never click on links within emails:** Never click on links within emails or reply to emails asking for your personal information.
- **Initiate contact:** Always access a website by typing in the real website address into the web browser.

Address

- **Call customer service:** Never trust phone numbers within emails. Look it up yourself and call the customer service when email seems suspicious.
- **Never give out personal information:** Never give out personal information upon email request. Companies will rarely ask for your personal information via emails.

Protect Yourself from Phishing Scams

Protect yourself from Phishing Scams

WARNING!

Clicking on links like the one in the email you've just read puts you at risk for identity theft. A phishing scam uses fraudulent email and web pages to steal bank account information, passwords, and other confidential information.

Do you know any time an email asks you to take an urgent action and type in your account number or social security number, it is probably a scam?

Really? How do I protect myself from these scams?

Follow these steps to protect yourself

- 1 Don't trust links in an email.

<http://www.amazon.com/update>

- 2 Never give out personal information upon email request.

Name: Jane Smith
SSN: 123 456 789

- 3 Look carefully at the web address.

<http://www.amazon.com>

- 4 Type in the real website address into a web browser.

<http://www.amazon.com>

- 5 Don't call company phone numbers in emails or instant messages. Check a reliable source such as a phone book or credit card statement.

Credit Card Statement

For customer service call
1-800-xxx-xxxx

- 6 Don't open unexpected email attachments or instant message download links.

First lab study results

- Security notices are an ineffective medium for training users
- Users educated with embedded training make better decisions than those sent security notices

Kumaraguru, P., Rhee, Y., Acquisti, A., Cranor, L. F., Hong, J., and Nunge, E. Protecting people from phishing: the design and evaluation of an embedded training email system. CHI '07, pp. 905-914.

Goals for second lab study

- Investigate knowledge retention
- Investigate different delivery channels
 - Do people need to fall for phishing emails to get trained?

Kumaraguru, P., Rhee, Y., Sheng, S., Hasan, S., Acquisti, A., Cranor, L. F., and Hong, J. Getting users to pay attention to anti-phishing education: Evaluation of retention and transfer. e-Crime Researchers Summit, Anti-Phishing Working Group (2007).

Study design

- Setup
 - Think aloud study
 - Role play as Bobby Smith, business administrator
 - Respond to Bobby's email
- Experiment
 - Part 1: 33 emails and one intervention
 - Part 2 (after 7 days): 16 emails and no intervention
- 56 participants across 4 conditions
 - Control: no intervention
 - Suspicion: an email from a friend
 - Non-embedded: intervention in the email
 - Embedded: intervention after clicking on link

Some of Bobby's messages

Email type	Sender	Subject
Legitimate-no-link	Brandy Anderson	Booking hotel rooms for visitors
Legitimate-link	Joseph Dicosta	Please check PayPal balance
Phishing-no-account	Wells Fargo	Update your bank information!
Phishing-account	eBay	Reactivate your eBay account
Spam	Eddie Arredondo	Fw: Re: You will want this job
Intervention	Amazon	Revision to your Amazon.com information

Hypotheses

- Participants in embedded condition
 - Learn more effectively
 - Retain more knowledgethan participants in other conditions

Data analysis

- We treated clicking on link to be falling for phishing
- 89% of the users who clicked went ahead and gave personal information

Results - Phishing account emails

Results - Phishing account emails

Results - Phishing account emails

Results - Phishing account emails

Results - Phishing account emails

Results – Legitimate link emails

Participant quote

- “I was more motivated to read the training materials since it was presented after me falling for the attack.”

Real world study: CMU

- Evaluate effectiveness of PhishGuru training in the real world
- Investigate retention after 1 week, 2 weeks, and 4 weeks
- Compare effectiveness of 2 training messages with effectiveness of 1 training message

P. Kumaraguru, J. Cranshaw, A. Acquisti, L. Cranor, J. Hong, M. A. Blair, and T. Pham. School of Phish: A Real-World Evaluation of Anti-Phishing Training. *SOUPS 2009*.

Study design

- Sent email to all CMU students, faculty and staff to recruit participants to opt-in to study
- 515 participants in three conditions
 - Control
 - One training message
 - Two training messages
- Emails sent over 28 day period
 - 7 simulated spear-phishing messages
 - 3 legitimate messages from ISO (cyber security scavenger hunt)
- Exit survey

Implementation

- Unique hash in the URL for each participant
- Demographic and department/status data linked to each hash
- Form does not POST login details
- Campus help desks and all spoofed organizations were notified before messages were sent

Study schedule

Day of the study	Control	One training message	Two training messages
Day 0	Test and real	Train and real	Train and real
Day 2	Test		
Day 7	Test and real		
Day 14	Test	Test	Train
Day 16	Test		
Day 21	Test		
Day 28	Test and real		
Day 35	Post-study survey

URL is not hidden

Simulated phishing website

The screenshot shows a web browser window with the title 'WebISO Secure Login'. The address bar displays the URL 'http://andrewwebmail.org/password/change.htm?ID=9009'. The page features a red header with the 'CarnegieMellon' logo. In the top right corner, there are 'ABOUT' and 'LOGOUT' buttons. The main content area is titled 'WebISO Secure Login' and contains a message: 'The resource you requested requires you to authenticate.' Below this message is a form with four input fields: 'User ID', 'Old password', 'New password', and 'Confirm password'. The 'User ID' field is pre-filled with 'ANDREW.CMU.EDU' and has a dropdown arrow. A 'Login' button is positioned below the password fields. At the bottom of the form, there is a section titled 'Carnegie Mellon Certificates' with a paragraph of text and a link to 'install the Carnegie Mellon CA Root Certificates in your browser.' Another section titled 'About this service.' provides additional information about WebISO and includes a '[more]' link. The browser's status bar at the bottom shows 'Done' on the left and 'Perspectives' on the right.

Results

- People trained with PhishGuru were less likely to click on phishing links than those not trained
- People retained their training for 28 days
- Two training messages are better than one
- PhishGuru training does not make people less likely to click on legitimate links
- Age was most significant factor in determining vulnerability

Effect of PhishGuru

Condition	N	% who clicked on Day 0	% who clicked on Day 28
Control	172	52.3	44.2
Trained	343	48.4	24.5

Results conditioned on participants who clicked on day 0

Trained participants less likely to fall for phish

Results conditioned on participants who clicked on day 0

Trained participants less likely to fall for phish

Trained participants remember what they learned 28 days later

Results conditioned on participants who clicked on day 0 and day 14

Two-train participants less likely than one-train participants to click on days 16 and 21

Results conditioned on participants who clicked on day 0 and day 14

Two-train participants less likely than one-train participants to click on days 16 and 21

Two-train participants less likely than one-train participants to provide information on day 28

Legitimate emails

Condition	N	Day 0	Day 7	Day 28
		Clicked %	Clicked %	Clicked %
Control	90	50.0	41.1	38.9
One-train	89	39.3	42.7	32.3
Two-train	77	48.1	44.2	35.1

No difference between the three conditions on day 0, 7, and 28

Legitimate emails

Condition	N	Day 0	Day 7	Day 28
		Clicked %	Clicked %	Clicked %
Control	90	50.0	41.1	38.9
One-train	89	39.3	42.7	32.3
Two-train	77	48.1	44.2	35.1

No difference between the three conditions on day 0, 7, and 28

No difference within the three conditions for the three emails

Students are most vulnerable

- Students significantly more likely to fall for phish than staff before training
- No significant differences based on student year, department, or gender
- 18-25 age group were consistently more vulnerable to phishing attacks on all days of the study than older participants

Percentage who clicked by age group

Age group	Day 0
18-25	62%
26-35	48%
36-45	33%
45 and older	43%

Most participants liked training, wanted more

- 280 completed post study survey
- 80% recommended that CMU continue PhishGuru training
 - “I really liked the idea of sending CMU students fake phishing emails and then saying to them, essentially, HEY! You could've just gotten scammed! You should be more careful - here's how....”
 - “I think the idea of using something fun, like a cartoon, to teach people about a serious subject is awesome!”

How To Avoid Online Scams

Don't ignore the URL!

Looking at the address bar can help you figure out if a web site is legitimate or a scam!

PLAY!

User Study

- Test participants' ability to identify phishing web sites before and after training
 - 10 URLs before training, 10 after, randomized
 - Up to 15 minutes of training
- Three conditions:
 - Web-based phishing education
 - Tutorial
 - Game
- 14 participants in each condition
 - Screened out security experts
 - Younger, college students

Results

- No significant difference in false negatives among the three groups
- Game group performed best in false positives
- All training we tested made people more suspicious, but only the game helped people distinguish phish from legitimate web sites

Field Study

Help Us With Our Research!

Enter to win a \$100 Amazon gift certificate!!!

Take a short 6-question phishing quiz before you play the game, another 6-question quiz after you play the game, and another 6-question quiz one week later for a chance to win a \$100 Amazon gift certificate. The quizzes and game should take about 12 minutes. If you get at least 80% of the quiz questions right you will get an extra raffle ticket.

We will record your quiz scores and answers to the survey questions and use them in our research. However your scores and responses will not be identified with your name.

You must be 13 or older to participate.

Coollest Security Tool Ever! - Online game to teach cyber-security

By: Alexandru Dumitru, Security News Editor

[Ads by Google](#)

[Network Security Blogs](#)

[New Security](#)

[Security Alerts](#)

[Security Awareness](#)

[Enlarge picture](#)

Now this is certainly something really nice! Researchers are advising users kindergarden-style! These people are going out of their way to help people stay secure. Of course, the best way of protecting yourself against the [threats](#) on the web is to know what they are and how to act against them. That's why the brainy dudes at [Carnegie Mellon University](#) have designed a game to help people out!

Now, I knew that some warnings and pieces of news were for the tech-savvy users that knew too much about security already, but they're dumbing down security measures so much that even a 10-year-old could stay safe on the web. If this doesn't make a difference, then I don't know what will!

The game is called Anti-Phishing Phil, and you can play it by clicking on this [link](#). Not only is it entertaining – I really like that fish – but it's also going to [teach](#) you a lot. So, this is a great initiative – these people are making it stupid-proof – web users should understand [phishing](#) threats and know how to watch out against them a lot better after playing the game. And you can play it just for fun, if you're a security geek. Or you can play it just to test your knowledge – in any case, I like this initiative a lot.

I've seen a similar thing on Agnitum's [website](#) – it's a quiz that will tell you if you're a security wizard or not. That was pretty cool, but this fish beats the crap out of any other web threat awareness tool ever!

Be my guest and click on the link above to Anti-Phishing Phil. You're bound to like it! And I wonder what's next, are researchers going to come up with a game with "Sexy Lisa" warning against "porn-related spam"?

Un approfondimento della nostra offerta on line

[INIZIATIVA DELLA BANCA POPOLARE DI SONDRIO]

Proteggersi dai furti in "rete" con Phil è un gioco da ragazzi

Per combattere spam e frodi in internet oggi c'è un efficace anti-phishing

DELEBIO Proteggersi dai furti di dati sensibili attraverso accorgimenti informatici e posta certificata, ma anche attraverso "Phil, il pesce anti-phishing". Presso la filiale delebiese della Banca Popolare di Sondrio è stato presentato ieri mattina un nuovo programma-gioco educativo rivolto a utenti e dipendenti per imparare a riconoscere e difendersi dai ladri di dati personali. «Abbiamo puntato decisamente all'accessibilità ai servizi da parte dei nostri clienti attraverso i più diversi canali - ha spiegato il vicedirettore generale di Bps, Milo Guseroli - e la sicurezza è caratteristica indispensabile per la diffusione di sistemi come quello delle operazioni bancarie on line. Fino ad oggi siamo riusciti a fronteggiare i rischi che gli utenti corrono in internet ma la guardia rimane alta e per questo dopo Navigo sereno" abbiamo scelto di lanciare Phil come metodo di prevenzione e informazione per utenti e dipendenti». L'ispettore capo della polizia delle comunicazioni di Sondrio, Valter Fumasoni insieme a Ivan Lorez hanno spiegato le origini del phishing «che rappresenta il furto di dati sensibili attraverso errori di programmazione che rendono vulnerabile il sistema».

Tra le indicazioni date per difendersi da e-mail e messaggi falsi, c'è quella di non for-

nire mai dati richiesti attraverso la posta elettronica, e di dotarsi di una mail certificata che sia cioè identificabile con certezza di provenienza. Il rischio, in caso di phishing, è che ottenendo i dati dell'utente possano essere effettuate operazioni quali prelievi e trasferimenti di denaro dal proprio conto verso l'estero. Il responsabile dei sistemi innovativi di Bps, Marco Tempa, ha sottolineato che «per fronteggiare le vulnerabilità tecniche e umane il gioco educativo Phil, il pesce anti-phishing avrà un ruolo importante nei programmi di formazione atti a prevenire le frodi e sensibilizzare i clienti. Alcuni anni fa abbiamo lanciato il sito www.navigo-sereno.it, che consente di trovare consigli, informazioni e software per la sicurezza del pc dei clienti. Phil, quale componente della nostra linea strategica sui temi della sicurezza on line, si concentrerà sulla formazione, con una versione limitata per il pubblico sul sito www.popso.it/sicurezza, e la versione completa riservata ai clienti nel servizio on line Scigno internet banking. Il gioco ha dimostrato di essere significativamente più efficace nel formare le persone a riconoscere gli attacchi di phishing rispetto alle più tradizionali soluzioni presenti sul mercato».

Annalisa Acquistapace

RELAX NEL LAGHETTO

Dopo la presentazione nella filiale delebiese della Banca Popolare, tutti al laghetto di Piantedo

FOTO SANDONINI

Why is Phil so popular?

- Addresses a problem people are concerned about
- Fun to play
- People like to win things (or even just get points)
- Get trained fast (about 10 minutes)
- Teaches actionable steps
- Interactive, reinforces learning

Security user education is possible

- Conventional wisdom: end-user security training does not work
- Our work shows otherwise
 - You can teach Johnny not to fall for phish
- We should still aim to reduce or eliminate computer security threats through technology and enforcement
- But these efforts should be complemented with user education
