

Earn \$10 for Participating in a Survey

Principal Investigator

XXX

Project Purpose and Procedures

This survey will study how people create, select, store, and manage their passwords.

There will be two sessions:

1. *At-Home Online Survey (Estimated Time: 30-45 minutes)*: Participants may take this portion of the survey at home. Participants will be asked questions on creating and storing passwords. Additionally, participants will be asked about the tools they use to help them manage passwords and about scenarios where passwords might be compromised.
2. *Laboratory Survey (Estimated Time: 30-45 minutes)*: Participants will need to come to a designated computer lab on campus. Participants will be asked to bring any aids they have for remembering passwords. They will be asked to answer questions about how many unique, similar, and related passwords they have. Participants will also be asked to complete a multiple-choice quiz about password selection.

We would be very grateful for your participation in the survey. As a thank you, you will receive \$10 after completing in both parts of the survey.

This project may be used in research publications and may be extended for the principal investigators' thesis research.
